

STAALMEESTER™

PRODUCTIVITY, COST EFFICIENCY & SERVICE TO THE FARMER

JF 92 Z6 Single row forage harvester

One of the top selling forage harvesters in the world..

The JF 92 Z6 is the smaller design of our flagship model the JF C120. The JF C120 has been the market leader in Southern Africa for the past 10 years.

The JF 92 Z6 is introduced as a smaller and cheaper alternative in the market. If the farmer requires a harvester to cut only a few hectares a year this smaller cheaper JF 92 Z6 is the perfect choice.

It is smaller but still very powerful and surpassed any opposition in it's class. The JF 92 Z6 cuts up to 23 tons per hour where our opposition has a 17 ton capacity per hour. 6 cutting lengths that vary from 3 to 18 mm for perfect forage. An adjustable rotor blade sharpener is a strong point, sharpening blades is as easy as 1,2,3

“Star” blade

clean cut of stalk, improves the regrowth of forage

Speed gearbox

simple change of chop size

Benefits

- High chopping precision, resulting in uniform chop sizes.
- The highest productivity in its category.
- The highest variety of chop sizes in its category.
- Low power requirement
- The most cost effective in its category.
- Lower fuel consumption and maintenance.
- JF's exclusive Z shaped knives with double function, chopping precision and throwing power.

Capacity*	Up to 23 ton/h
Cut sizes	6 (3 – 18 mm)
Number of rotor	1
Number of rotor blades	6
Power source	PTO
Number of gathering drums	4
Recommended PTO power	50 – 80 kW
Required PTO revolution	540
Transmission system	Belt driven

Chop Size Uniformity - 6 chop sizes (from 3 mm to 18 mm)

3 mm

5 mm

6 mm

8,5 mm

11 mm

* Heads and polyethylene guard are optional items. Productivity might vary and depends on the following factors: cut size; productivity of forage per hectare; tractor power; logistic capacity (wagons) for forage transportation;
