

STAALMEESTER™

PRODUCTIVITY, COST EFFICIENCY & SERVICE TO THE FARMER

6776 Pick Up Hammer Mill

Engineering skills for years to come!

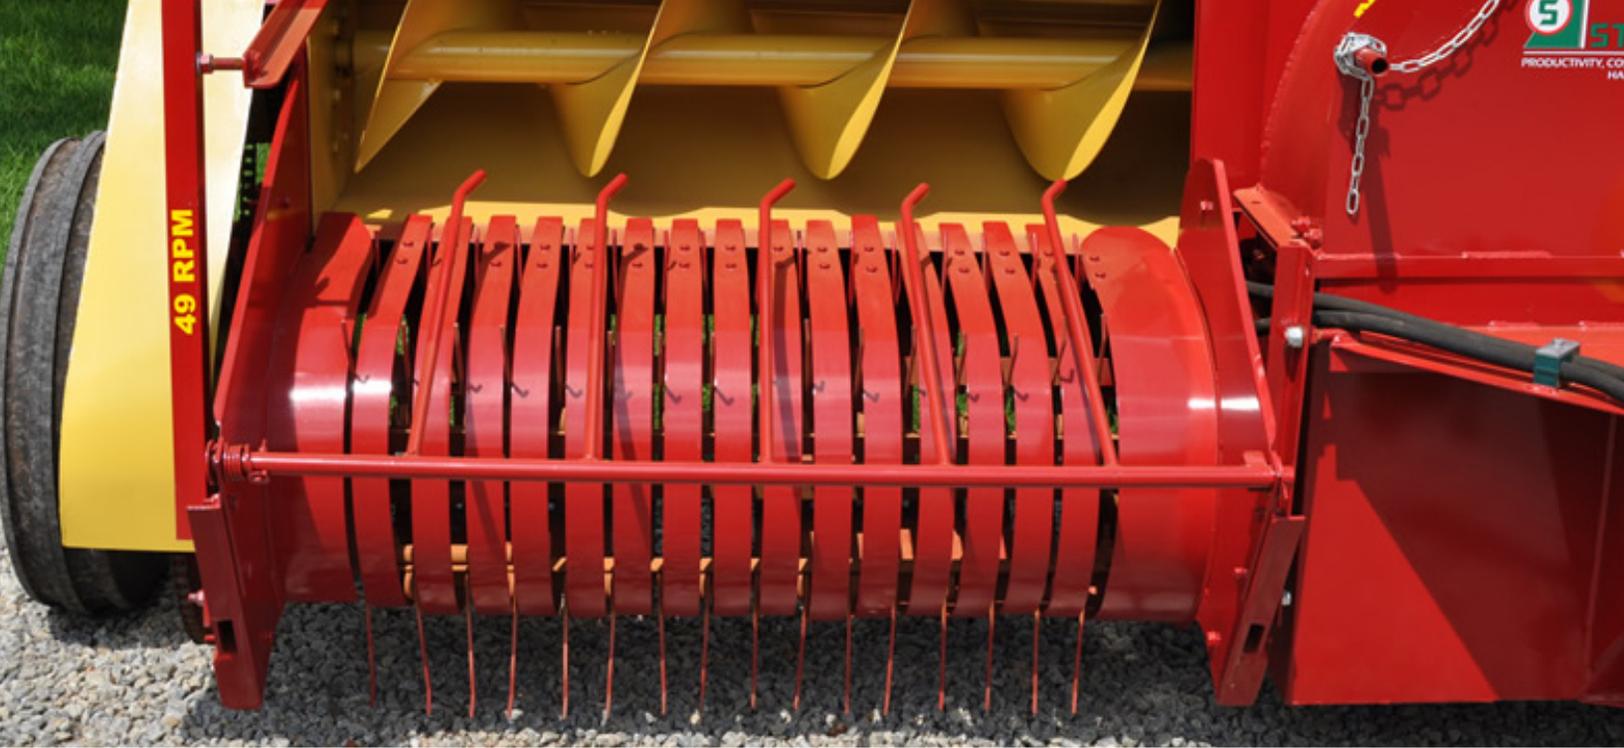

Staalmeester's advanced design and high quality workmanship ensures a constant high output even under difficult conditions, which will give unparalleled confidence.

Staalmeester's equipment is specially designed for the agricultural conditions in Southern Africa. The fodder is milled and treated in one process. Double handling is therefore wholly eliminated. Material such as lucerne, grass, sugar cane, peanut hay, wheat straw and maize stalks can be picked up from the swath effortlessly and milled to your specifications.

This is a thoroughly tested unit, consisting of the standard Staalmeester Hammer mill attached to the robust gathering unit specially designed for South African conditions. The gathering unit is bolted to the mill. Unscrew it and you have an ordinary mill.

The result of many years of careful development..

Much experience and meticulous development has produced this superbly engineered choice of three versatile combination, to this day progressively developed and refined, they remain the standard throughout the Southern hemisphere by which hammer mill combinations are judged.

The milled material can be collected in bags on a platform or tossed into a trailer by means of a discharge chute.

Specifications:

Pickup width	1300 mm
Width	3200 mm
Length	1840 mm
Weight	1010 kg
kW Required**	45 - 78 kW
Cam disc bearings	4

Hydraulic motor with control valve

Capacity with 25mm screen:

Shelled Maize

25 mm	21 800 kg/h
-------------	-------------

Lucerne

25 mm	11 680 kg/h
-------------	-------------

Optional : Double Cyclone or chute

When downtime means lost profits, choose the hammer mill that works for a living. Choose a Staalmeester!
